

Title: Senior Developer

Location: Newark, New Jersey

Position Description:

We are a dedicated team of enthusiastic technologists, specializing in creative problem solving, and using new methodologies for development. We practice agile development, small group collaboration, pairing, cloud service integration, and we love DevOps. Our mission is to create a modern startup / labs type feel inside of a well-established, publicly traded corporation. This position is one that could grow into a lead role for the right candidate.

Responsibilities:

- Design and implement highly scalable, interactive web and mobile applications with high usability
- Design and implement backend application interfaces for data and services
- Collaborate with business analysts to define software requirements for development
- Support production software operations, test and debug programs
- Report progress and status of assigned tasks to project teams and managers
- Provide technical leadership and motivation to junior developers
- Master new topics on a daily basis

Qualifications:

- 5-7 years of experience
- 2 years of tech architecture
- Experience with AWS (Lambda, ECS, Cloudformation, ...)
- Enthusiasm for modern web tech and paradigms
- Experience with Node.js, Javascript, Angular, React, React Native, Swift, JAVA, Objective-C
- Experience with Unix/Linux
- Strong understanding of agile development, continuous integration / delivery, and TDD
- Experience with SQL(Postgres, MySQL, Oracle, ...), and NoSQL(Redis, DynamoDB,...) data stores
- Experience with open source software
- Experience with Docker
- Excitement to work with new technologies and systems
- Experience with API development
- Excellent understanding of web security practices
